5 signs your roof NEEDS A LOOK this November

1

CLOGGED DRAINS

Fall leaves pile up
in the drain, causing water
to sit on the roof
with nowhere to go.

2

PONDING

**Heading into winter,
water that isn’t draining
can lead to ice on your roof
once it freezes.**

3

WATER DAMAGE

A leak can travel feet before it shows up as a stain. Left alone, it can lead to wet insulation and a rotting roof deck.

4

OPEN SEAMS

**An open seam
can cause a leak,
and patching only works
if it’s done right.**

5

WORN SPOTS

Areas of constant traffic can cause a roof to wear thin. If you see any of these signs, reach out to CTA Roofing.
